**BOTANICAL/COMMERCIAL CLASSIFICATION**

*Chrysanthemum mortifolium*/Decorative Pot Mum

**VARIETAL DENOMINATION**

cv. 'Chanoud'

**Summary of the Invention**

The present invention comprises a new and distinct cultivar of *Chrysanthemum*, botanically known as *Chrysanthemum mortifolium*, and hereinafter is referred to by the cultivar name 'Chanoud'.

The new cultivar of the present invention was created at Nuaille, France during 1994 when plants of the 'Chadixi' cultivar (non-patented in the United States) were irradiated with gamma irradiation. Cuttings from the irradiated plant were used to produce new plants that were carefully studied. The new cultivar was selected during 1994 from among the rooted cuttings because of its distinctive combination of characteristics.

The 'Chadixi' parent was commercially available in France beginning in January 1992. The 'Chadixi' cultivar is not known to have ever been introduced for growing in the United States.
